

Masternodes Of Cowrium: Staking, Hosting, Maintenance And Getting The Annual ROI!

Ever since the Cowrium came into existence, there has been a lot of talk in the industry regarding our Masternodes.

The Masternode introduced by Cowrium is almost similar to Dash Masternode. But why is it being used? Well, the functionality is similar, but this one ensures much better efficiency and premium features that are bound to benefit the platform massively. Today security has become a huge issue worldwide. Only attractive features and applications won't get the job done. People are getting serious about the various data that they share everywhere. This is why we have designed our blockchain-based platform with all the technological advancements that make it the safest and the most secure place on the internet.

The presence of Masternode ensures that all the crucial data that you input during payment are stored safely by the platform and not shared with any third party. Millions of people lose their hard-earned money worldwide due to irresponsible handling of data by the various platforms on the internet. This is why we have introduced Masternode to ensure the highest levels of security along with anonymity for all the payments & transactions that are made digitally. This is what sets Cowrium apart from the crowd and makes us the most trusted name in the industry. Not only this, the Masternode makes all the payments that are being processed through the network, faster so that investors, as well as users, don't have to waste their precious time trying to get things done.

More on the Masternode

The Masternode is basically a python based app which can be easily hosted on any Linux server, even along with the regular Cowrium nodes. The Masternode can be activated by simply using the controller wallet and the private keys for the wallet can be safely stored on any local computer. The wallet that you would be using for the Masternode should be different from the usual wallet, used by you at the platform for other transactions. Your Masternode wallet should be devoted to the task as the registration process can only be completed by sending certain transactions from your controller wallet that has the collateral.

The staking process

Our staking system is also quite innovative as it ensures that all the current holders of the CWR earn a fixed annual income as their rewards. These rewards are offered to the CWR holders, for contributing so much towards the maintenance and the security of our network. Cowrium's Masternodes that are private in nature make our blockchain ecosystem a unifying authority. Another thing that makes this ecosystem a class apart, is the availability of multiple options for staking the CWR coins. If you don't want to go for the Masternodes that is VPN based then you can easily opt for the mobile & web-based staking process for the CWR coins.

The new implementations

Recently there has been a proposal for introducing another brand new Masternode system that will revolutionize this brilliant platform that is already grabbing the attention of the investors worldwide. Currently, the Cowrium Main-net is going through the implementation process which is subjected to further changes that could be suggested by our development team for better performance and functionality of the platform.

The need for financial collaterals

If you want to activate any Masternode, you will have to give a basic collateral amount of 10000 CWR. The reward that you will be offered and the collateral will be entirely proportional till 100000 CWR, by an increment of almost 10000 CWR.

We give you the opportunity to run only a single Masternode with the 100 000 CWR collateral instead of trying to run 10 Masternodes at the same time and receive the same amount of rewards. In case you are wondering, 100,000 CWR automatically means Masternode+. What most people fail to understand is that the upper limit only exists so that there is not just one shared Masternode. The entire process is not meant to be against the shared Masternodes. It simply aims to decentralize the Masternode as much as possible. Also, the Masternode+ can be increased till 10. **This gives you complete flexibility to choose your collateral as per your convenience. This will not only make the process easier for investors but will also uplift the value of CWR as a token.**

Let's take a look at the ROI

You can expect the calculations for the rewards to be done daily and it will be accumulating for the entire year. During the very first year, on takeoff, the ROI can be 50% and even more than that! For all those who are wondering, for running any Masternode, you need a basic amount of 10000 CWR as collateral. In case you are thinking of running a Masternode+, you will require at least 100,000 CWR as the collateral. What makes this platform so appealing to the investors as well as the users all over the world is the fact that the Team is extremely active all the time. The total Masternodes combined with the total amount of Masternode+ along with the present ROI is calculated and updated every day for the convenience of the users. What many people are not aware of, is that the ROI does not depend on the Masternodes, so the more Masternodes you have, the lower will be your ROI. The ROI is completely dependent on your collateral instead, so invest smartly and get lucrative returns every year!

Also the ROI is entirely based on the current realities and can be quite promising for any investor who wishes to own the CWR. Not only today, but the CWR also has immense potential in the near future too. So, the ROI will experience a fast yet steady growth even in the future.

Hosting the nodes

There are a few basic hosting requirements for our Masternodes, which are:

- VPS/dedicated Linux host
- Dedicated ipv4 address
- 4GB RAM
- SSD Disk (40GB)
- CPU core (2)
- Unmetered bandwidth

To meet the requirements of the node, it is best to have a disk that is fast. All these requirements are subjected to modification so it's best to contact our Team for any doubts regarding the process.

Maintaining them

Even though the nodes aren't that high on maintenance, there are certain things that you must know before getting engaged in the process. Both the nodes and the Masternodes require urgent updates. Sometimes the POW chain doesn't require any hard forks but it is entirely necessary for the Masternode holders to keep updating the classic nodes as well as the Masternodes.

All information channels will be passing through the Social media network of Cowrium. So there is a particular chain or system through which the information flows. This means, if you fail to update your Masternodes due to some reason, it will be notified to our Team and you won't be able to access the rewards unless you update your nodes. So make sure to keep these few points in mind while dealing with these innovative Masternodes and get ready to benefit endlessly from the brilliant rewarding system of Cowrium.

Our decentralized blockchain-based platform is a global phenomenon, revolutionizing the industry with brilliant features and the rewarding system. Not just this, the presence of smart contracts and access to interoperability also makes things much better and easier for the users. The incredible AI support offered for crypto also makes it easier for us to bring something so innovative to you. A major focus is on bridging the gap that exists between the crypto and the Fiat through our innovations at Cowrium. This has been a driving force behind all our efforts to make Cowrium successful in the industry among the millions of global crypto users.

The five main elements of Cowrium are

- The multidimensional smart contracts
- The mass-oriented cryptocurrency- Cowrie
- CowDEX - A decentralized exchange that is highly secured
- ErrandBoy - A DAP through which you can conduct crypto or Fiat transactions
- Cowrie Stability AI- An AI system to predict the market and analyze the data

So Cowrium is not just a blockchain-based platform, it's way more than that. It's an experience that we gift our users! Make sure to get your hands on the Masternodes as soon as you can and get ready to benefit endlessly from the brilliant rewarding system of Cowrium.
